OBJECTIVE

Enthusiastic Computer Science student with a strong foundation in software development and hands-on experience through university projects and internships. Eager to apply my technical skills and innovative thinking in a dynamic software engineering role. Passionate about contributing to a team that values creativity and impactful solutions.

EDUCATION

Bachelor of Computer Science, University of Greenwich Expected 2025
Relevant Courses: Advanced Programming, Data Structures and Algorithms, Artificial Intelligence, Machine Learning, Statistical Techniques with R, Paradigms of Programming

SKILLS

Technical Skills	Python, Java, C++, MySQL, MongoDB ,Git, Docker, AWS, TensorFlow, Scikit-learn
Soft Skills	Problem Solving, Teamwork, Communication, Adaptability, Time Management

EXPERIENCE

Java Developer (Course Project) Advanced Programming January 2024 - March 2024
University of Greenwich *London, UK*

- Designed and implemented a networked distributed system using Java for group-based client-server communication. This involved creating both Graphical User Interface (GUI) and Command-Line Interface (CLI) versions to enhance user interaction.
- Engineered a dynamic coordinator selection system to maintain the group state and handle spontaneous disconnections or role transitions within the network, ensuring continuous operation without interruption.
- Implemented comprehensive JUnit tests to verify the functionality of all components, particularly focusing on the reliability of the group communication and coordinator election process.
- Utilized design patterns such as Singleton and Observer to streamline the development process and enhance code maintainability and scalability.

Machine Learning Developer February 2024 - May 2024
University of Greenwich *London, UK*

- Implemented and optimized machine learning models including CNNs, SVMs, FFNNs, and NNs for handwritten digit recognition using TensorFlow and Keras.
- Achieved high accuracy rates on the MNIST dataset, demonstrating model effectiveness across varied handwriting inputs.
- Developed a GUI for real-time digit prediction, enhancing user interaction and practical application of the models.
- Contributed to a collaborative report, summarizing findings and methodology improvements.

PROJECTS

London Underground Journey Planner. Developed a route planning application to calculate the shortest journey times between stations on the London Underground. Utilized Python and specialized algorithms to handle complex transit data efficiently, enhancing travel planning for public use. Successfully integrated user-friendly interfaces and tested extensively for accuracy, significantly improving commuter experience across London.

EXTRA-CURRICULAR ACTIVITIES

- Volunteer and Participant at COM Tech Area Society, University of Greenwich: Actively participated and volunteered in events organized by the COM Tech Area Society. Assisted in coordinating tech workshops, contributing to the enrichment of the tech community at the University of Greenwich.
- Provided guidance and support to multiple junior students, helping them navigate academic challenges and resolve queries effectively. Enhanced their understanding of course material and fostered a supportive learning environment.
- Participated in Hackathon, collaborating with a team to develop innovative solutions under time constraints. Enhanced skills in rapid prototyping.
