SUMMARY

First Class Computer Science graduate specializing in data analysis, business intelligence, and process optimization. Proven ability to leverage Python, SQL, and machine learning to drive 30% operational improvements. Experienced in cross-functional collaboration, system integration, and data-driven decision making. Seeking Business Analyst, Data Analyst, or Financial Technology roles where technical expertise and analytical skills deliver measurable business impact.

EDUCATION

University of Greenwich <i>Bachelor of Science in Computer Science - First Class Honours</i> - Relevant Coursework: Data Structures & Algorithms, Database Systems, Artificial Intelligence, Machine Learning, Statistical Analysis, Software Engineering - Dissertation: Real-Time Multimodal AI System for Predictive Analytics (Grade: First Class)	London, UK 2022–2025
Gujarat Higher Secondary Education Board <i>A-Level Equivalent in Science - Distinction</i> Achieved top grades in Mathematics, Physics, Chemistry, and Computer Science	Gujarat, India 2020–2022

PROFESSIONAL EXPERIENCE

Business Intelligence Analyst & Operations Supervisor <i>ArcadeX, Battersea Power Station</i> - Spearheaded data analysis initiatives that identified operational bottlenecks, resulting in 30% improvement in service speed through targeted process optimization - Developed automated tracking systems using Python and Google Sheets to analyze customer metrics, enabling data-driven decision making for management team - Optimized POS system workflows through close collaboration with IT teams, reducing transaction errors by 25% and enhancing customer checkout experience - Managed and trained team of 15 staff members, implementing structured shift training that reduced onboarding time by 40%	Mar 2024 – Sep 2024 London, UK
EPOS Tech Support & Operations Manager <i>Peppermint Events (Summer Festivals 2025)</i> - Overseeing on-site EPOS system setup, configuration, and troubleshooting across large-scale festival environments, ensuring seamless transaction flow and data accuracy - Coordinating bar operations and vendor integrations with digital payment systems, bridging technical infrastructure and live event execution - Supporting real-time data reporting, cash/voucher reconciliation, and system monitoring to maintain financial transparency and operational efficiency - Collaborating with event managers, network providers, and data teams to ensure network reliability and continuity of EPOS service across multiple venues - Providing on-site technical training and support to bar staff, promoting digital literacy and standardizing EPOS best practices throughout the festival operations team	May 2025 – Present Various UK Locations

PROJECTS

Real-Time Multimodal AI System for Predictive Analytics - Engineered three custom AI models (facial, speech, text) using CNNs and Transformers, achieving 81.2% accuracy in emotion recognition for ASD users - Deployed models in client-side web application using TensorFlow.js, ensuring full data privacy with real-time inference capabilities under 150ms latency - Implemented advanced data augmentation techniques to enhance model robustness, improving performance on limited datasets by 15% - Architected modular full-stack application with adaptive CBT tools, focusing on accessibility and ethical AI deployment	Sep 2024 – Apr 2025
Twitter Sentiment Analysis for Airline Customer Feedback 	Nov 2023 – Jan 2024

- Fine-tuned RoBERTa transformer model for sentiment classification, achieving 85.2% F1-score on airline tweet dataset
- Optimized hyperparameters using Optuna framework, comparing performance against Logistic Regression and Naive Bayes baselines
- Conducted comprehensive analysis using precision, recall, and confusion matrices to validate model performance and business applicability

TECHNICAL SKILLS

Programming Languages: Python, R, SQL, Java, C++, Scala, Bash

Machine Learning & AI: TensorFlow, PyTorch, Keras, Scikit-learn, Computer Vision, NLP, Deep Learning

Data Analysis & Visualization: pandas, NumPy, Tableau, Power BI, Matplotlib, seaborn, Statistical Analysis

Big Data & Cloud: Apache Spark, AWS (S3, EC2), Google Cloud (BigQuery), Azure ML, Distributed Computing

Database & Tools: PostgreSQL, MySQL, Git, Docker, Kubernetes, Airflow, Flask, FastAPI, Jupyter

Business Intelligence: Process Optimization, Data-Driven Decision Making, A/B Testing, Requirements Analysis
